

Ideal Water's Granular Activated Carbon (GAC) Filters effectively filter impurities from your water. Removing the impurities from your entire home's water, allowing you peace of mind knowing virtually all of the chlorine and its by-products are gone.

Benefits

Effective, Efficient and Eco-Friendly

Cleaner, better tasting water from every tap, faucet and shower

More cost-effective and convenient than bottled water

Increases the life of your plumbing, fixtures and water using appliances

Reduces the chlorine or chloramine taste and odor.

When the water tastes great, you'll drink more water and that's good for your health

No more bottled water waste, just clean tasting ***Ideal Water.***

What Happens:

Step 1: The filter is installed between the main water line and the interior pipes.

Step 2: Water enters the filter where it passes through the granulated activated carbon (GAC), and impurities are reduced.

Step 3: Water then passes out of the filter and into your home, providing clean great tasting water from every tap.

Step 4: Ideal Water will contact you years later to schedule a service to replace the media. All you need to do is enjoy the refreshing taste of your water until then.
